## Supplementary Materials

Table S1. Quality assessment checklist.
Table S2. Quality assessment details.
Table S3. Meta-analysis results of differences in resting state brain activity between ET and HC after excluding Ha et al. 2015.

Table S4. Subgroup meta-analysis results in medication-free ET patients showing hyper- and hypoactivity of brain regions.

Table S5. Subgroup meta-analysis results in studies in ET patients with head tremor showing hyper- and hypoactivity of brain regions.

Table S6. Subgroup meta-analysis results in studies with threshold correction showing hyper- and hypoactivity of brain regions.

Table S7. Subgroup meta-analysis results in studies using fMRI methods showing hyper- and hypoactivity of brain regions.

Table S8. Jackknife sensitivity analysis of subgroup meta-analysis in medication-free ET patients.
Table S9. Jackknife sensitivity analysis of subgroup meta-analysis in ET patients with head tremor.
Table S10. Jackknife sensitivity analysis of subgroup meta-analysis in studies with correction threshold.

Table S11. Jackknife sensitivity analysis of subgroup meta-analysis in studies using fMRI methods.

Table S12. Jackknife sensitivity analysis of meta-analysis results after excluding Ha et al. 2015.

Table S1. Quality assessment checklist (when criteria were partially met, 0.5 points assigned).

## Category 1: Participants

Score (0/0.5/1)

1. Patients were evaluated prospectively, specific diagnostic criteria were applied, and demographic data were reported.
2. Comparison participants were evaluated prospectively psychiatric and medical illnesses were excluded.
3. Important variables (e.g., age, sex, illness duration, onset, medication status, handedness) were checked either by stratification or statistically.
4. Sample size per group $>10$.

Category 2: Methods for image acquisition and analysis
5. Whole brain analysis was automated with no a priori regional selection.
6. Coordinates reported in a standard space.
7. The imaging technique used was clearly described so that it could be reproduced.
8. Measurements were clearly described so that they could be reproduced.

## Category 3: Results and conclusions

9. Statistical parameters for significant and important non-significant differences were provided.
10. Conclusions were consistent with the results obtained and the limitations were discussed.

TOTAL/10

Table S2. Quality assessment scores of included studies.

| Studies | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | Total |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
