

Figure 5. Generation of CD8⁺ T-cell clones to 6-amino substituted abacavir analogues. a) Antigen specificity of T-cell clones generated to analogues G, H, 15 and J by way of cellular proliferation. Clones yielding an SI < 2 were considered positive. b) Representative ELISPOT images from wells containing clones from two HLA-B*57:01+ donors incubated in the presence of analogues H, 15 or J (5-20 μM). c) Representative ELISPOT images from wells containing clones from two HLA-B*57:01+ donors incubated in the presence of abacavir and analogues H, 15 or J (35 μM).
